

Systems Engineering

Our systems engineering services incorporate both technical and management processes. We integrate all aspects of our customer programs, system components and component interfaces function as intended in the operational environment. Our system engineering support covers a broad range of engineering activities focusing on well managed systems development including scheduling, planning, analysis, development, testing, and deployment support. Our support includes:

- Requirements Analysis
- System Architecture and Design
- System Documentation
- System Training
- COTS HW/SW Integration

Information Assurance

We provide full life cycle systems security engineering services. These services include:

- Security Architecture Design
- Risk Analysis and Assessments
- Security Policy Development and Compliance with DITSCAP & NIACAP
- Integrated Security Solutions

- Security Administration
- Tools-Based Monitoring and Audits

IT Infrastructure Management

We provide network design, implementation, and maintenance support. Our certified engineers apply the latest network and security management tools to provide reliable and secure network operations per client-specified Service Level Agreements (SLAs). We provide seamless end-to-end managed network services including the IT Backbone like:

- DNS
- LDAP
- Proxy
- Mail Servers
- Routers and Switches
- Firewall

Program Management Support

Program Management, Acquisition, and Consulting services build on our extensive hands-on experience coupled with our in-depth knowledge of government statutes, regulations, and policies. This ensures that clients' needs are effectively met.

TekFed Management
